

2020 TRAINING PORTFOLIO

At BLD, we want to make your training memorable and effective. Our courses are designed by experienced investigators, and we are able to bespoke the content of any training programme to fit the exact needs of your organisation. Our qualified trainers not only have the skills and knowledge to share, they also have a wealth of policing experience amongst them. For more information on how our training could increase your capability and empower your staff, contact enquiries@bluelightsdigital.com

ADVANCED OSINT (OPEN-SOURCE INTELLIGENCE)

In a world where people conduct so much of their lives online - socialising, banking, shopping, dating, gaming, working, consuming media - there is a wealth of information left behind by the average person going about their day-to-day activities. Our four-day practical Open-Source Intelligence course will ensure you are able to locate and capture the details that matter, whether they relate to criminal activity or simply fragments of intelligence that are relevant to an investigation.

4 days

CRYPTOCURRENCY INVESTIGATION

Blockchain-based cryptocurrencies offer a way to store and transfer real financial value anonymously, with obvious attraction for those engaged in fraud, financial crime, and other illicit activity online. Our groundbreaking cryptocurrency investigation training will provide a sound understanding of the unique investigative opportunities presented by blockchain. Using our Deanonymisation Strategy, delegates will be able to trace transactions and identify off-chain lines of enquiry to unmask users.

2 days

DIGITAL TACTICAL ADVISOR (LEVEL 1 & LEVEL 2)

Our DTAC training courses cover a broad array of digital investigative techniques, including: acquisition and interpretation of communications data, open-source intelligence, wifi routers & networks, dark web & cryptocurrency, vehicle telematics, geolocation of devices, digital forensics, and more. Incorporating valuable inputs from subject matter experts, including the perspective of those employed by a criminal defence, the programme aims to equip delegates with a sound understanding of strategy and the confidence to act as a tactical advisor to the senior investigating officer of any major or critical incident.

2 x 5 days

WIFI ROUTER INVESTIGATION

97% of UK homes are equipped with a wifi router. The vast majority of these are consumer-grade routers supplied by an internet service provider. The router's role in the home network means that it can be an often-overlooked source of intelligence and evidence in any investigation, often containing details of devices joining & leaving the network, and also detailed logs of device activity. Our WiFi Router Investigation course will teach delegates how to quickly access the valuable data within these devices, capture it in a robust evidential format, and interpret it to draw sound investigative conclusions.

1 day

DRONE INVESTIGATION

The use of drones for recreational, commercial, and criminal purposes has increased exponentially over recent years. Consumer-grade technology, available on the high street, now has implications across a number of areas from aviation to personal security and beyond. Our drone investigation training incorporates the use of established digital forensic tools to extract and analyse data from a downed drone, as well as considering the wider implications of data acquisition from service providers.

5 days

DIGITAL SUPPORT ADVISOR

Tailored to the needs of your agency or organisation, our Digital Support Advisor training will equip delegates with the knowledge they need to advise and focus investigative efforts on the digital front. Whether for the purposes of a criminal investigation, or the needs of a private enterprise, this high-level training course will ensure that no digital leads are overlooked in the early stages of any investigation.

1 day

COMMUNICATIONS DATA ACQUISITION & INTERPRETATION

In a world dominated by telecommunications and internet applications, digital footprints are left behind by almost every conceivable day-to-day activity. Investigating authorities have the legislative backing to acquire the detailed communications data that is collected by private companies, when necessary and proportionate to do so. Our Communications Data Acquisition & Interpretation course will incorporate your organisation's processes for acquiring such data, and provide delegates with the knowledge they need to make sense of the results and produce an evidential product from the raw data.

2 days

DIGITAL SKILLS - FROM FRONTLINE TO SENIOR MANAGEMENT

A flexible training course, deliverable to a large audience, our Digital Skills training will take into account the aims and objectives of your organisation and identify the opportunities to increase effectiveness across the board. With course content agreed following consultation with our trainers, this input can be designed for your frontline staff, your investigation teams, supervisors, or senior management. With a multitude of potential topics - comms data, internet-of-things, digital forensics, open-source intelligence, dark web, technical surveillance, cybercrime, and more - the delivery can be truly bespoke to your organisation.

1 day

CONTACT US FOR MORE INFORMATION:

All of our training products can be tailored to meet your needs, both in terms of content and duration. If you feel that you or your organisation may benefit from any of the areas in which we provide training, don't hesitate to contact us to discuss a bespoke course. Our trainers are experienced, and currently active, investigators and subject matter experts. Our training can be delivered at your premises, or at a number of BLD locations throughout the UK.

Please contact us at: enquiries@bluelightsdigital.com for more information.
