

Cellebrite Frontliner key capabilities:

Witnesses and victims can share key evidence from their devices using a wireless, non-intrusive format.

Share HTML or UFDR* forensic reports with the wider team in real-time from the scene.

Gather all information into a single case.

Password protect captured data.

Record audio of witness testimony, take pictures or videos, and automatically tag them with meta data that includes location details, time stamps and hash values – all admissible in court.

*Open with Cellebrite Reader/Cellebrite Physical Analyzer

Minimal System Requirements	
Operating System	Android 7.0 and up
Storage	Minimal 50MB of internal storage for app installation. Additional storage is needed for the collected data, we can recommend 200MB at least.
Connectivity	Internet connectivity for initial license activation. Hotspot activation for data transfer (copy files). Mobile data not mandatory.
Other	Google Play services (min Ver 11.6.0) to be installed on the host device.
Target device (sharing device) requirements:	iOS or Android device

Cellebrite Field Solutions

Cellebrite Field Solutions expand the reach of digital forensics by empowering first responders to collect digital evidence at the crime scene and feed those findings back to the investigative team to provide a focus point to begin an investigation. Cellebrite Frontliner is an integral component of Field solutions; increasing operational efficiency and easily leveraged by law enforcement personnel outside the lab.
