

Key Benefits

Real time data extraction to answer critical questions

Extract specific data from the widest variety of devices, SIM cards or USBs. Cellebrite Responder enables automatic device detection to find the right workflow per device type. Easily extract passwords, disable or bypass user locks and decode data from more than 1,500 mobile applications in minutes.

Encourage community collaboration

The Quick Copy function allows victims and witnesses to share only the data that's relevant to the case while leaving all other information private. Build trust in the community while increasing the efficiency of digital evidence extraction.

View and analyze data in a streamlined workflow

Quickly discover key locations using Map View and other filter tools including timelines, contacts, crime-related watch lists, bookmarks, and sort order. Easily create and share reports with the wider investigation team or streamline case data into Cellebrite Investigation Solutions for deeper analysis.

Implement your internal processes with Cellebrite Responder and Cellebrite Commander

Monitor and enable/disable each functionality according to user permissions. Users can also pre-define which reports will be automatically saved and where and define case details using fields and values.
